
This report reflects major trends in global Material Conflict in 2013 compared with 2012 as reported by the GDELT (Global Database of Events, Language, and Tone) (http://gdelt.utdallas.edu/) event database. The top countries exhibiting the greatest increase in Material Conflict in 2013 compared with 2012 (and which had sufficient global news coverage to analyze) are examined in more detail in individual Country Detail briefings on the following pages. To better approximate the most “important” developments of the year, this report is based on the aggregate volume of global news articles reporting Material Conflict events in each country, rather than on the raw number of unique events. For example, the 2011 Egyptian Tahrir Square protest would count as only a single “event,” which would make Egypt appear relatively stable from a raw event count standpoint, but by measuring the volume of news coverage of that protest event, its global significance is immediately clear. Thus, from a technical standpoint, this report synthesizes macro-level change across the entire global news system to identify those countries undergoing the greatest change in media coverage of Material Conflict events and thereby offers a reasonable approximation of the global media consensus view of the most “important” emerging Material Conflict developments across the entire world.

For each country, the light grey map at top left of its profile page shows all Material Conflict events from 2013 for that country and the surrounding region. The black map to its right shows a gridded trend analysis where the region is broken into a regular grid and for each grid cell the difference in the number of Material Conflict events for that location in 2013 is compared with 2012. Grid cells that have not changed substantially or for which few events were reported during either year are hidden, while cells with significant increases in conflict events are displayed in red and those with significant decreases are displayed in green. The size of the dot indicates the magnitude of the change, with larger dots indicating greater change. The first colored barchart on the left below the maps breaks down the affiliations of the Initiator (Actor1) and Victim (Actor2) of all conflict events for 2013 and 2012, examining changes in the actors involved. The next barchart breaks down all conflict events into the six root categories of Material Conflict. Finally, the last barchart shows the relative breakdown for all events, not just conflict events, of all 20 root event categories, showing how prominent conflict events were to the overall picture of this country in 2012-2013. Finally, at the bottom of the page is a timeline plotting a smoothed 48-hour following window average of the number of articles reporting Material Conflict events for that country over the two year period, contextualizing the significance of increases and decreases.

Please note that this report is designed specifically to identify emerging annual global conflict trends and thus countries with sustained ongoing conflicts may have a lower ranking than a country with far less violence if the levels of unrest in the country remained relatively stable between 2012 and 2013. In other words, this is not a report on the most unstable countries, but rather a report on those countries undergoing the greatest change in media attention to their instability over the past year.

This report is a highly experimental prototype so please use caution when utilizing its findings.

The table below shows a complete ranking of all countries in 2013 compared with 2012. The “Change” column reports the increase or decrease in the total raw number of articles mentioning Material Conflict events in that country, while the “Coverage Volume” column displays the actual raw counts (2013 / 2012). Finally, the “Coverage Rank” column ranks each country based on the total raw volume of articles, with 1 being the country with the most articles, and displays its rank (2013 / 2012) and change from 2012 to 2013.
