FEBRUARY 18, 2026

GEOPOLITICAL FRAGMENTATION
DEEPENS AS STALLED PEACE
INITIATIVES, THE WEAPONIZATION
OF ECONOMIC STATECRAFT, AND A
LANDMARK JUDICIAL RECKONING
FOR BIG TECH DEFINE A PERIOD OF
SYSTEMIC INSTABILITY.

DAY-AT-A-GLANCE

The international landscape on February 18-19, 2026, is characterized by a significant breakdown in multilateral trust and the emergence of unilateral, "transactional" diplomacy, primarily driven by the policies of the Trump administration. In Geneva, high-stakes negotiations to end the conflicts in [Ukraine and Gaza](#) have reached a stalemate, with participating parties failing to bridge fundamental gaps regarding territorial sovereignty and security guarantees. In Gaza, the first Ramadan since a tenuous ceasefire is being observed under the shadow of [ongoing Israeli strikes](#) and a dire humanitarian crisis, as the US attempts to supplant UN mediation with its newly formed "Board of Peace," which faces skepticism from European allies.

Simultaneously, the global technology sector faces a dual challenge of intense competition

and unprecedented legal liability. In a Los Angeles courtroom, Meta CEO [Mark Zuckerberg is testifying](#) in a landmark jury trial regarding the "deliberately addictive" design of social media platforms, a case that mirrors the historic anti-tobacco suits. This domestic legal pressure in the US coincides with a global race for technological and resource supremacy, as evidenced by the US-China rivalry over [critical minerals](#) and the rapid development of "agentic" artificial intelligence. The Trump administration's move to favor innovation over regulation in the AI sector signals a strategic shift toward maintaining a competitive edge at any cost, even as concerns over "digital casinos" and societal harm mount.

Domestically, featured nations are grappling with acute political instability and institutional decay. Peru has ousted its [third consecutive president](#) in a single term, reflecting a broader trend of populist backlash against corruption. In Japan, the implementation of "Takaichinomics" has led to a [significant devaluation](#) of the Yen, fueling a tourism boom that is straining local infrastructure and exacerbating social friction. Meanwhile, the fallout from the release of the "Epstein files" continues to ripple through the US political and corporate elite, contributing to a climate of public distrust and allegations of high-level censorship within the media.

MAJOR DEVELOPMENTS

The Landmark Trial of Big Tech

- Meta CEO Mark Zuckerberg is facing a jury trial in Los Angeles over allegations that platforms like [Instagram and YouTube](#) were designed to be intentionally addictive to children.

- The trial is being compared to the [1990s tobacco litigation](#), shifting the legal focus from content liability to "defective product" design.
- Whistleblower Kelly Stonelake alleges the company prioritized engagement and [maximized time spent](#) over child safety, ignoring internal warnings about predators and mental health risks.
- Global regulatory responses are intensifying, with [Australia, France, and the UK](#) moving to implement bans or restrictions on social media use for minors.

Stalled Multilateral Diplomacy and Stalemated Conflicts

- US-mediated talks in Geneva between Russia and Ukraine have [concluded without a breakthrough](#), with neither side willing to concede on territorial issues in the Donbas.
- Iranian nuclear negotiations show "cautious optimism" but remain deadlocked over [Tehran's refusal](#) to accept US "red lines" regarding missile programs and regional proxies.
- In Gaza, the humanitarian situation is critical as Ramadan begins; Israeli forces have [not ceased attacks](#) despite the October ceasefire agreement.
- Syria has begun closing the [Al-Hol detention camp](#), transferring thousands of families to northern Aleppo and repatriating fighters to Iraq, sparking human rights concerns.

The Race for Resource and AI Supremacy

- The US and its allies are attempting to form a [minerals trade block](#) to break China's monopoly on critical rare earth elements vital for high-tech industries.

- President Trump issued an [executive order on AI](#), signaling a competitive race with adversaries for "AI supremacy" and creating a task force to challenge restrictive state regulations.
- Experts warn of the rise of ["agentic AI,"](#) where systems move from searching to autonomous action, potentially destabilizing financial markets and labor pools.
- The concept of ["Sovereign AI"](#) is emerging as nations seek to maintain control over their own data infrastructure to avoid reliance on the US or China.

KEY GOVERNANCE TOPICS

Armed Conflict & Militarization

- Russia continues its [campaign of strikes](#) against Ukrainian energy infrastructure while reinforcing its territorial claims.
- The US has initiated a [massive military buildup](#) in the Middle East, including aircraft carriers and bombers, as a pressure tactic against Iran.
- Sexual violence is reportedly being used as a [weapon of war](#) in Sudan's Darfur region by paramilitary forces (RSF).

Diplomacy & Statecraft

- The Trump administration is promoting a ["Board of Peace"](#) for Gaza, bypassing the UN and charging \$1 billion for permanent seats on the board.
- Russia is accused of using ["theatrics"](#) in Geneva to buy time for its armed forces on the battlefield.
- The UK and other European nations have [declined to join](#) the US-led peace board, fearing it undermines the United Nations.

Energy & Critical Minerals

- The US government has pledged [\\$12 billion](#) to stockpile critical minerals and secure domestic supply deals.
- China has previously [curbed rare earth exports](#) to Japan as a lever in diplomatic disputes over Taiwan.
- The African Union is pushing for ["African rules"](#) for mineral extraction to ensure resource sovereignty.

Legal Warfare & Regulatory Risk

- The US judicial system is testing whether social media companies can be treated as [manufacturers of harmful products](#).
- A Chilean court is invoking ["universal jurisdiction"](#) to consider war crimes charges against a former Israeli sniper.
- The FCC is being accused of [censorship](#) and creating a "climate of fear" among US broadcasters regarding interviews with political candidates.

DEEP DIVE: TRENDS AND THEMES

The End of Digital Neutrality and the Rise of Platform Liability

The Zuckerberg trial represents a fundamental shift in the global understanding of digital platforms. No longer viewed as neutral conduits for content, social media companies are being characterized as architects of [engineered addiction](#). The legal strategy of comparing platforms to "digital nicotine" and "digital casinos" suggests that the immunity granted by [Section 230](#) is being systematically challenged by viewing algorithmic design as a physical product attribute. This trend is mirrored by nations

like [China and Australia](#) implementing "minor modes" and strict access bans, signaling that the era of self-regulation for Big Tech has effectively ended.

Transactional Displacement of Peace and the International Institutions

The creation of a \$5 billion ["Board of Peace"](#) with paid seats represents the privatization of diplomacy. By positioning this board as an alternative to the [United Nations](#), the US administration is signaling a move toward "transactional" statecraft where peace is brokered by business interests and elite circles rather than established multilateral treaties. This approach has caused a significant rift with [France and Germany](#), who view it as a move that undermines global order and further fractures the Western alliance.

Resource Nationalism and the Weaponization of Supply Chains

The global race for rare earth minerals and critical components for AI data centers has transitioned from economic competition to a state of [geopolitical weaponization](#). The US effort to form a minerals cartel with Japan and the EU is a direct response to China's three-decade strategy to [dominate production](#). This trend towards "friend-shoring" and stockpiling indicates a future where trade is governed by political alignment rather than market efficiency, likely leading to sustained inflationary pressures and supply chain volatility.

INTERNAL DYNAMICS & DOMESTIC INSTABILITY

United States: Polarization and Institutional Distrust

- Public trust in media is being undermined by allegations of [top-down censorship](#) and the use of federal agencies to control political narratives.
- The release of the [Epstein files](#) is fueling a "syndicate" narrative, implicating global elites and deepening the divide between the public and the ruling class.
- The administration's aggressive immigration tactics, including the [killing of US citizens](#) at protests by ICE officers, have sparked intense debate and potential mid-term electoral consequences.

Peru: Chronic Political Instability

- The ousting of [Interim President Jose](#) after only four months reflects a complete collapse of institutional stability, with 7 presidents in 9 years.
- Public approval of the Peruvian Congress is at a [mere 4%](#), with citizens viewing the political process as a "circus" favoring organized crime.

Japan: The Drawbacks of Expansionary Policy

- Prime Minister Sannai Takaichi's ["Takaichinomics"](#) has successfully boosted tourism but significantly reduced the buying power of the Yen for local citizens.
- Record high budgets and currency devaluation are leading to [cultural frictions](#) as local residents find themselves priced out of their own communities by international visitors.

EXTERNAL DYNAMICS & GLOBAL POSTURE

The world is increasingly portrayed as a [fracturing multipolar arena](#) where traditional alliances are under severe strain. The US posture is one of "Peace through Strength" and economic dominance, characterized by a [military buildup in the Persian Gulf](#) and the imposition of tariffs on China. However, this posture is being met with resistance from allies who fear the collapse of the "liberal international order" and the transformation of American politics in a [fascist direction](#).

Nations like [India](#) are positioning themselves as mediators and hubs for global technological debate, while the [African Union](#) is attempting to exert its collective political agency in the face of perceived "hegemony" from both Western powers and China. The international system is moving away from globalization toward a "time of polycrisis," where geopolitical, environmental, and technological threats are [intersecting and reinforcing](#) each other.

THE ECONOMIC ENVIRONMENT

Market sentiment is increasingly dominated by geopolitical risk pricing and the rapid shift toward technological protectionism. The emergence of "Takaichinomics" in Japan and the US-China mineral trade war are key drivers of current market volatility.

- **Currency Fluctuations:** The Japanese Yen has reached [record lows](#) following the lower house vote, though it has seen some minor recovery.
- **Commodity Pressures:** Rare earth mineral prices are expected to [rise sharply](#) as supply dumping protections and stockpiling plans are implemented.

- **Tech Investment:** AI investment is currently [16 times higher](#) than current revenue returns, leading some analysts to warn of an "LLM bubble."
- **Agricultural Hardship:** Farmers in the Middle East, particularly in [Syria and Jordan](#), are facing catastrophic crop losses due to the "worst drought in decades."
- **Trade Policy:** US tariffs on China and potential tariffs on [Canada](#) are making it harder for US farmers to export products, even as domestic grocery prices remain high.

LEADERSHIP CHANGES

A high-velocity turnover in national leadership is contributing to global unpredictability, with several key transitions occurring under scandal or extreme political pressure.

- **Sannai Takaichi (Japan):** Officially sworn in as [prime minister](#) following a landslide snap election victory; she is the country's first female leader.
- **Tarik Rahman (Bangladesh):** Sworn in as prime minister in the country's [first fair election](#) in nearly 20 years, heading a cabinet of 49 members.
- **Jose Harry (Peru):** Ousted and [impeached by Congress](#) after only four months in power over corruption and ties to Chinese business executives.
- **Thomas Pritzker (Hyatt Hotels):** Stepping down as [executive chairman](#) after DOJ documents revealed long-term contact with Jeffrey Epstein.
- **Jesse Jackson (Civil Rights):** The prominent US activist has [died at age 84](#) following a hospitalization for a degenerative condition.

EDITORIAL POSTURE & STORY HIERARCHY

Al Jazeera's editorial priority for the day is the [Zuckerberg trial](#) and the broader humanitarian crisis in [Gaza](#). The network maintains a critical tone toward both Big Tech and the Israeli military, frequently linking the "addictive" nature of social media to real-world tragedies. The coverage of the ["Board of Peace"](#) is notably skeptical, framing it as an attempt by the Trump administration to monetize diplomacy and marginalize the UN. The network also gives significant weight to "forgotten conflicts" like [Sudan](#), while stories about [Japan's tourism boom](#) are presented through a lens of cultural and economic strain. **Conspicuous Omissions:** There was almost no mention of the internal political status of the European Union member states beyond their rejection of the US peace board, and detailed military movements in the Ukraine conflict were secondary to the coverage of the inconclusive Geneva talks.

GEOPOLITICAL FRAMING

The current geopolitical narrative is framed as a struggle between a resurgent, unilateral US administration and a fracturing international order struggling to maintain traditional norms. Leaders are increasingly judged by their "transactional" effectiveness rather than adherence to ideological blocs.

COUNTRIES

- **United States:** Portrayed as a powerful but unpredictable ["digital dictatorship"](#) that is increasingly inward-looking and hostile to multilateralism. Explicitly characterized as having a "low regard for international agreements."

- **China:** Framed as a ["china-centric"](#) model that is modernizing rapidly and dominating global supply chains, yet remains an unethical actor in regions like Xinjiang.
- **Israel:** Portrayed as an [aggressive power](#) that "enjoys an immense level of lack of accountability," while its narrative of victimhood is used to "morally justify unprecedented violence."
- **Iran:** Characterized as a nation [under siege](#), seeking "tangible economic benefit" but paralyzed by a "cloud of mistrust" with the West.

LEADERS

- **Donald Trump:** Portrayed as a leader who operates on ["fear"](#) and "hatred," seeking to "transform American politics in a fascist direction" while pursuing a "transactional" foreign policy.
- **Mark Zuckerberg:** Framed as a man ["conceivably responsible"](#) for the deaths of children, seeking to "wash his hands" of responsibility while presiding over "digital casinos."
- **Vladimir Zelensky:** Portrayed as being under ["public pressure"](#) from Washington to make territorial concessions he deems unfair.

NON-STATE & CORPORATE ACTORS

- **Meta/Google:** Framed as ["digital casinos"](#) that knowingly exploit human nature for profit at the expense of child safety.
- **RSF (Sudan):** Characterized as a [brutal force](#) using sexual violence as a weapon of war and seizing territory with impunity.
- **The UN:** Portrayed as an institution on the ["path of being rendered obsolete"](#) due to the US veto and lack of enforcement power.

INFORMATION WARFARE ENVIRONMENT

The information environment is described as a "post-truth world" where [AI-generated content](#) and "dead internet theory" (where the internet is dominated by bots and models) are challenging the foundations of trust. Streamers like [Hasan Piker](#) are offered as "unfiltered alternatives" to a mainstream media that is perceived as being " beholden" to state interests. The "meta-narrative" of the day suggests that [TikTok](#) has become a critical front in the information war, as it is credited with undermining the "Israeli spin" on the Gaza conflict. Censorship is a major theme, with US broadcasters allegedly self-censoring to avoid [FCC retaliation](#) and Iranian authorities maintaining a "total internet blackout" to suppress domestic dissent.

HYPOTHESES AND FUTURE OUTLOOK

- The US "Board of Peace" will likely fail as a multilateral tool but succeed in [monetizing influence](#) for a narrow set of business interests, further isolating the US from its traditional European allies.
- If Meta is found liable for platform design, it will trigger a [cascading collapse](#) of current business models based on infinite scroll and predictive algorithms, leading to a fundamental "re-architecture" of the internet.
- The race for [critical minerals](#) will lead to a new form of "Cold War" based on resource blocks, where nations like Australia and Canada become central to Western security strategy.

- The rapid advancement toward ["agentic AI"](#) will outpace global regulation, leading to significant market shocks as these systems begin making autonomous high-stakes financial decisions.

STRATEGIC FORESIGHT

Short Term (1-4 Weeks): Expect [heightened military tension](#) in the Persian Gulf as the US strike group arrives. The Zuckerberg trial will likely see the release of more "discoverable records" that could trigger further stock volatility for Meta and Alphabet.

Medium Term (1-6 Months): The [June deadline](#) set by Trump for a Ukraine peace deal will likely force the Zelensky administration into a crisis point, potentially leading to a rupture in US-Ukraine relations if territorial concessions are forced.

Long Term (1-5 Years): The failure of multilateralism in Gaza and Ukraine could lead to a [permanent obsolescence](#) of the UN Security Council, replaced by "transactional boards" and regional blocks. The "Takaichinomix" model in Japan will either stabilize as a new standard for export-driven growth or lead to a significant debt crisis if the Yen continues its uncontrolled slide.

RISK ASSESSMENT

- **Regional War with Iran:** Trigger: A failure of the [third round of talks](#) combined with the arrival of the US aircraft carrier within striking distance. Likelihood: Moderate-High. Impact: Catastrophic for global energy prices. Mitigations: Calibrating "red lines" to meet realistic security goals and de-escalating naval maneuvers.

- **Institutional Collapse in Peru:** Trigger: Failure to hold [fair general elections](#) in April or a further surge in organized crime influence. Likelihood: High. Impact: Regional instability in South America. Mitigations: Immediate international monitoring of the electoral process and anti-corruption reforms.
- **Big Tech Systemic Financial Shock:** Trigger: A guilty verdict in the [Los Angeles jury trial](#) leading to multi-billion dollar damages and forced product recalls. Likelihood: Moderate. Impact: Severe impact on the S&P 500. Mitigations: Proactive "safety by design" settlements and early adoption of new transparency standards.
- **Gaza Famine and Total State Failure:** Trigger: Continued [blocking of aid trucks](#) (below the 600 truck/day minimum) and destruction of remaining community kitchens. Likelihood: High. Impact: Massive loss of life and regional refugee spillover. Mitigations: Immediate opening of all crossing points and restoration of UNRWA/ international aid funding.
- **Artificial Intelligence Labor Market Displacement:** Trigger: The widespread adoption of ["agentic AI"](#) in white-collar sectors without transitional safety nets. Likelihood: Moderate-High in the medium term. Impact: Widespread social unrest and economic instability. Mitigations: Establishing baseline labor protections and "human in the loop" regulatory requirements.

GAPS & BLIND SPOTS

- The transcripts do not detail the [specific military objectives](#) or the actual "ground truth" of Russian territorial gains versus Ukrainian counter-offensives.

- There is a lack of information on the [internal politics of the European Union](#) regarding how they plan to counter the US "Board of Peace" beyond simple non-participation.
- The actual status of the ["Epstein files"](#) unredacted names is not confirmed, making it difficult to distinguish between factual reports and speculative conspiracy theories.
- The reporting on [rural US healthcare collapse](#) is significant but lacks a detailed analysis of the legislative causes or planned federal interventions.

CONTRARIAN NARRATIVE SCENARIOS

The "Theatrical" Stalemate

While the media frames the [Geneva talks](#) as a failure, a contrarian view suggests they are a deliberate "theatrical" performance for a US audience. Both Russia and Ukraine may be using the "inconclusive" nature of these talks to satisfy the Trump administration's demand for negotiations while simultaneously [regrouping for a massive spring offensive](#), indicating that neither side has any intention of a peaceful settlement.

Takaichinomics as a Controlled Burn

The devaluation of the [Japanese Yen](#) is framed as a crisis for locals, but a contrarian analysis suggests it is a calculated "controlled burn." By intentionally weakening the currency to fuel a tourism and export boom, the Japanese government may be attempting to "hyper-inflate" away its massive national debt, sacrificing middle-class buying power for a long-term [reset of the sovereign balance sheet](#).

The "Digital Nicotine" Case as a Corporate Diversion

The focus on [child safety and addiction](#) in the Zuckerberg trial may serve as a diversion from the more existential threat to Big Tech: [antitrust and data sovereignty](#). By allowing a public reckoning on mental health, these companies may be pre-emptively offering concessions on "design" to avoid more damaging regulations that would break their monopolies or nationalize their data infrastructure.

RECOMMENDATIONS & IMPLICATIONS

For Statecraft/Public Sector:

- **Security:** Prepare for a [potential naval flashpoint](#) in the Persian Gulf; regional actors should maintain open communication channels despite stalled formal talks.
- **Economic:** Accelerate investment in [rare earth mineral supply chains](#) outside the China-controlled blocks to mitigate risks of supply chain weaponization.
- **Diplomatic:** European and Asian nations should formalize ["Sovereign AI" alliances](#) to ensure technological autonomy as the US moves toward a purely transactional model.

For Private Sector/Investors:

- **Supply Chain:** Investors should price in [long-term volatility](#) in critical minerals; businesses reliant on high-tech components must diversify sourcing immediately.
- **Regulatory Compliance:** Social media and gaming firms must move toward ["safety by design"](#) models now to avoid the catastrophic legal liability demonstrated in the Zuckerberg case.

- **Capital Allocation:** While AI remains a long-term play, caution is advised regarding overvalued [LLM model companies](#); shift capital toward AI infrastructure and data center physical assets.

LEGISLATIVE ROUNDUP

Legislative activity is currently dominated by restrictive measures on technology use and unilateral executive actions in the US aimed at deregulation and resource management.

BILLS DISCUSSED/DEBATED:

- **Australian Social Media Law (2025):** A law blocking [access to under 16s](#) with penalties up to \$35 million for non-compliance.
- **French Lower House Bill (Jan 2026):** Passed to [ban social media use](#) for those under 15.
- **US Equal Time Rule Modification (Jan 2026):** New government guidance requiring [late-night talk shows](#) to provide equal time to all political candidates.
- **China's Minor Mode Regulations:** National rules [limiting screen time](#) and imposing curfews for children.

HEARINGS & PRESS EVENTS:

- **Zuckerberg Jury Trial (Los Angeles):** A landmark case investigating ["addictive design"](#) and corporate negligence toward youth mental health.
- **India AI Impact Summit:** An international gathering focused on the [ethical use and regulation](#) of "agentic" AI technologies.

- **US Congressional Committee on Epstein Files:** A hearing where [AG Pam Bondy](#) was accused of overseeing a massive cover-up by redacting suspects and revealing victims.

KEY STORIES

- **Meta/Mark Zuckerberg Jury Trial:** Meta CEO Mark Zuckerberg testifies in a [landmark Los Angeles jury trial](#) regarding the addictive nature of social media platforms and their impact on youth mental health. The trial follows years of parental activism and whistleblower revelations.
- **US-Mediated Peace Talks in Geneva:** Inconclusive negotiations between [Russia/Ukraine](#) and [US/Iran](#) conclude without breakthroughs. Key issues include territorial sovereignty in Donbas and Iran's missile/proxy networks.
- **Ramadan in Gaza:** Palestinians observe the holy month amidst [continued Israeli strikes](#) and a humanitarian crisis characterized by acute shortages of food, water, and medicine. UN reporting indicates more than 600 Palestinians killed in the last four months.
- **Trump's "Board of Peace":** The US administration creates a [board to oversee Gaza reconstruction](#), with \$5 billion in pledges but significant opposition from European allies who fear it undermines the UN.
- **Peruvian Presidential Ousting:** Peru's Congress [impeaches Interim President Jose](#) for corruption just four months into his term, marking continued extreme political instability.

- **Critical Minerals Race:** The US government pledges [\\$12 billion](#) to break China's monopoly on rare earth minerals, forming a trade block with Japan and the EU to secure high-tech supply chains.
- **Sudan War Crimes:** The UN reports at least [200 cases of rape](#) used as a weapon of war by the RSF paramilitary in North Darfur, with true figures likely much higher.
- **Death of Jesse Jackson:** Civil rights activist [Jesse Jackson dies at 84](#); President Trump and others issue statements on his legacy of fighting for equality.
- **Japan's Sannai Takaichi sworn in:** Japan's first female prime minister [takes office](#) and initiates aggressive "Takaichinomics" to stimulate the economy, causing a significant drop in the Yen's value.
- **Syria Al-Hol Camp Closure:** The Syrian government [closes the Al-Hol camp](#), transferring 23,000 people to a new site in northern Aleppo and sending thousands of male fighters to Iraq for trial.
- **Epstein Files Fallout:** New document releases from the DOJ link [Thomas Pritzker](#) and other high-profile figures to Jeffrey Epstein, leading to corporate resignations and calls for political accountability.
- **India AI Summit:** Global leaders and tech CEOs meet in [New Delhi](#) to discuss the practical and ethical use of AI, as the era of "agentic AI" begins to threaten global labor markets.
- **Universal Jurisdiction in Chile:** A Chilean court considers war crimes charges against a [former Israeli sniper](#) following his social media posts during the Al-Shifa hospital siege.

- **US Media Censorship Allegations:** Broadcast networks face [censorship accusations](#) after the FCC investigates daytime shows and late-night host Stephen Colbert reports interference from corporate legal teams.
- **Severe Drought in Syria/Jordan:** Farmers in the [Yarmuk basin](#) face a total crop loss as the Abdin dam dries up, with water prices reaching unsustainable levels for local populations.

ABOUT THIS REPORT

Today's Media Trends is a public interest experiment in applying deep thematic trend analysis to television news coverage from around the world to explore how responsibly applied advanced AI can help journalists and scholars better understand the overarching trends, themes and patterns of our global world.

No data is used to train or tune any AI model.

Each morning, in collaboration with the Internet Archive's TV News Archive, we apply Google's Gemini 3 to deeply examine yesterday's coverage from each television news channel to tease out the overarching themes and trends of its news coverage into a richly annotated thematic analysis. Each high-level insight is connected back to the original broadcast, allowing journalists and scholars to understand the dominate themes and trends and instantly click out to the underlying sources for details.

By helping journalists and scholars see the broader trends and patterns of global news coverage, this analysis helps them identify relevant stories and coverage they might not otherwise have encountered and uncover

connections, emphases and narrative shifts that enable more comprehensive reporting and deeper, evidence-based research.

This report is entirely machine generated using Gemini 3 and may include errors and omissions. Please verify all findings. No data is used to train or tune any AI model.
